

```

import java.util.Scanner

public class FirstProgram
{
    public static void main(String[] args)
    {
        Scanner input = new Scanner(System.in)

        System.out.println("This is my first Java program!");
        System.out.print("What is your name? ");
        String name = input.next();

        System.out.printf("Hello %s welcome to CSE 1341 at SMU!
\n", name);

        System.out.println("I am pretty intelligent. I can count
the numbers from 1 to 50 and find their sum!");

        int total = 0;
        for (int i=1; i<=50; i++)
        {
            System.out.print(i + " ");
            total = total + i;
        }
        System.out.printf("\nThe sum is %d. \n", total);
    }
}

```

```

javac "FirstProgram - Error.java"
FirstProgram - Error.java:1: error: ';' expected
import java.util.Scanner
                        ^
FirstProgram - Error.java:7: error: ';' expected
    Scanner input = new Scanner(System.in)
                                ^

```

The compiler expected for there to be semicolons after importing a class and after declaring a variable on lines one and seven, respectively. The program would not be able to execute those lines without them.
